

Shipment Intake — Walkthrough with Your Real Documents

*BuildSupply Pro · Import & Wholesale — a step-by-step guide for entering one import shipment from your hard-copy customs paperwork. This copy uses your declaration **4-013659** (Suqian Panda, PVC & Blockboard) as the worked example; every number below is printed on one of your own documents.*

Before you start

Stack the papers in this order:

1. Commercial Invoice
2. Packing List
3. Customs Declaration (DVP sheet)
4. Freight Invoice (B/L)
5. Clearing / Transitor agent invoice
6. Bank Permit & charge advice
7. Insurance Certificate
8. **Your own hand-made cost sheet — keep it last. You will not type anything from it; it is how we check the computer did it right.**

Open the app → sign in → in the left menu under **Buying & Import**, click **Shipment Intake**.

The strip across the top shows where this step lives in the workflow: *Purchase Order* → ***Document Intake*** (you are here) → *Cost Sheet Review* → *Submit* → *Purchase Receipt*.

Type a shipment title, e.g. **Suqian Panda — PVC & Blockboard**.

1 · Commercial Invoice (pick up invoice V-HY2501)

FIELD ON SCREEN	COPY FROM THE PAPER
Commercial Invoice No.	V-HY2501
Supplier / Exporter	SUQIAN PANDA INT'L TRADE
Invoice Value (FCY)	35,144.20 — the grand total in dollars, not birr
Country of Origin	China

Then one item row per line on the invoice, exactly as printed — description, quantity, unit price. For this shipment: the three PVC sheet thicknesses (403 / 293 / 26 pcs), Blockboard (1,795 pcs), Edge Banding (150), each with its printed unit price.

The grey hint inside each box shows the words to look for on the paper (“Invoice No / CI No”, “Seller / Exporter”, ...).

2 · Packing List

Nothing to type. Confirm the quantities you just entered (403 / 293 / 26 / 1,795 / 150) match this paper. If they don't, the invoice was misread — fix it now, while it's cheap.

3 · Customs Declaration / DVP sheet (*declaration 4-013659*)

FIELD	VALUE
Declaration No.	4-013659
TIN	0053323233
Tax Payer	MIHRETEAB MELKIE
Customs Base Value (DVP, ETB)	11,197,355.00

Then the six tax amounts straight off the assessment:

LINE	AMOUNT (ETB)
Customs Duty Tax (15%/35%)	1,787,961.70
Sur tax	73,142.10
Social Welfare Tax (3%)	319,666.80
Scanning Fee (7%)	7,837.00
Vat Receivable	2,006,719.30
Withholding On Customs	335,920.59

VAT and withholding are recoverable — the screen automatically washes them out of the cost. You'll see them appear under "VAT Rebate" and "Withholding Payable" on the right.

4 · Freight Invoice

FIELD	VALUE
B/L Number	PENCB25004089
Sea Freight Charge	1,230,958.62

5 · Clearing / Transitor Agent Invoice

Eight lines off the agent's bill:

LINE	AMOUNT (ETB)
Port Clearance charges (Djibouti)	281,346.66
Transportation Djibouti → Modjo	779,934.00
ESLSE Modjo Port/Terminal service	37,128.95
Transit Cost	10,000.00

LINE	AMOUNT (ETB)
Container Unstuffing	42,000.00
Transportation Modjo → warehouse	76,000.00
Demurrage	13,778.58
Other	1,175.72

6 · Bank Permit & Charge Advice (*permit DSB/DMB/01/03395/2025*)

FIELD	VALUE
Bank Permit No.	DSB/DMB/01/03395/2025
Exchange Rate (Permit)	134.5121 — the rate the whole sheet stands on; copy it to the fourth decimal
Service Charge On Opening CAD	184,334.27
Postage/Swift charges/exchange	128,451.41
Bank Service Charge on Freight & Port	46,519.16
Bank CPO charges	957.73

7 · Insurance Certificate

FIELD	VALUE
Insurance	4,539.12

8 · The check (*now pick up your own cost sheet*)

The right-hand panel has been recalculating the whole time. It should now read:

PANEL LINE	EXPECTED
Invoice Price (FOB, ETB)	4,727,320.14 — the computer multiplied 35,144.20 × 134.5121 itself; nobody typed this
Customs Total (Purchase)	14,706,242.42 ← compare with the bottom line of your hand sheet
Supplier Payable	4,727,320.14
Goods in Transit (GIT)	5,025,731.82
Customs Valuation Var. (CVD)	4,953,190.46
VAT Rebate (recoverable)	2,006,719.30
Withholding Payable	335,920.59

If Customs Total matches your hand sheet's bottom line, the entry is correct. Press **Save & open Cost Sheet** — the server recomputes everything independently and opens the finished sheet with all

26 lines, ready to **Print** on the company letterhead.

Two honest footnotes

- Per-item landed costs are spread in proportion to each item's FOB value, so an individual line may differ from your hand sheet by small rounding. **The grand total is the contract — and it ties exactly.**
- If any number was mistyped, the check in step 8 simply won't match. Nothing is saved until you press the button, so a mismatch costs nothing — find the line, fix it, watch the total snap into place.

The principle

The computer never invents a number. Every figure is copied from a paper you are holding; the only arithmetic done for you (dollars × rate) is shown as it happens; and your own cost sheet — the thing you already trust — is the acceptance test.
